

Grant Scout Pro

User Guide

A step-by-step walkthrough of finding, tracking, and winning grants with Grant Scout Pro - from setting up your organization profile to submitting a finished proposal package.

13. Getting Help Anytime

1. Getting Started: Onboarding

The first time you sign in, Grant Scout Pro walks you through a 6-step onboarding flow. This builds your organization's profile, which every grant match, AI score, and generated document draws on - the more accurate this is, the better your results.

- 1 Organization Discovery** - Enter your website URL. Grant Scout Pro scans it automatically to pull your mission, focus areas, and current programs, saving you from typing it all in by hand.
- 2 Profile Review** - Check what was discovered and correct anything that's off before moving on.
- 3 Funding Profile** - Add details like nonprofit status, EIN, staff size, and annual budget, which many federal and state grants use as eligibility filters.
- 4 Grant Goals** - Tell it what kinds of funding you're after (populations served, geographic focus, past grant experience) so recommendations are relevant from day one.
- 5 Workspace Setup** - Name your first workspace. A workspace is the container for one project or funding effort - its own grants, documents, and team.
- 6 Launch Workspace** - Review everything and launch. You'll land straight in your new workspace.

***Tip:** You can revisit and update your organization profile any time from Settings inside a workspace - it isn't locked in after onboarding.*

2. Your Dashboard

After onboarding, **/home** is your cross-workspace dashboard - the place to see everything at a glance and jump into any workspace.

What's on it

- **Your Workspaces** - every workspace you belong to, with a one-click way to open one or start a new one.
- **Compare Grants** - put grants you've shortlisted side by side to weigh fit and effort before committing.
- **Recommendations** - a cross-workspace view of AI-suggested grants based on documents you've uploaded.
- **How it works** - a quick reminder of the four-step flow: find grants, compare & save, draft with AI, submit & track.

***Tip:** A small floating button in the bottom-left corner of every page (once you're signed in) always brings you back to this dashboard, no matter how deep you are in a workspace.*

3. Inside a Workspace

Open any workspace and you'll see a left-hand sidebar with everything organized into sections. This is where day-to-day work happens.

Sidebar sections

- **Overview** - a snapshot of this workspace: documents, grants, AI analyses run, team members, recent activity, and your current plan.
- **Grants** - Browse Grants, Recommended, Search, and Search Analytics (covered in Section 4).
- **Documents** - All Documents, New Document, and Upload (covered in Section 6).
- **AI Tools** - Assistant Chat, Location Intelligence, and AI Insights (Section 8).
- **CRM** - Pipeline and Contacts, for tracking funder relationships (Section 9).
- **Workspace** - Activity (a log of what's happened) and Notifications (Section 11).
- **Account** - Usage, Billing, Integrations, Settings, and Admin for this workspace.

The top bar stays visible as you scroll and shows the current page title, your notification bell, and your account menu on the right.

4. Finding Grants

Browse Grants

A filterable list of every grant Grant Scout Pro has ingested for your workspace - federal opportunities, plus state and foundation sources where available for your organization's state.

Recommended

Grants the AI has already scored against your organization profile, ranked by fit. Each one shows a 0-100 match score and a plain-language reason for the score.

Search

Run a keyword search across all ingested grants, with filters for category, funding amount, deadline, and eligibility. A manual search you run here counts toward your workspace's daily search allowance; the automatic twice-daily scan behind Recommended does not.

Search Analytics

A history of what your team has searched for and how often, useful for spotting patterns in what you're consistently looking for.

Tip: Click into any grant to see its full detail page: description, eligibility, open/close dates, award range, the AI match score and rationale (if scored), and buttons to start a submission package or negotiation prep.

5. AI Match Scoring & Notifications

Twice a day, Grant Scout Pro re-scans your organization's website for new or changed programs, pulls in freshly matching grants, and scores the fit of anything new using AI.

- 1 The scan refreshes your profile's picture of your current projects from your own website.
- 2 It searches for new grants matching your focus areas and adds any it hasn't seen before.
- 3 It scores newly-added grants from 0-100 for fit against your profile, with a written rationale and a checklist of what the listing says is needed for submission.
- 4 If a grant scores high enough (75 or above by default), you get a notification and an email.

Click the bell icon in the top bar any time to see your notifications. Clicking a grant match notification takes you straight to that grant's detail page.

6. Working with Documents

Documents are where proposal writing happens - each one lives inside a workspace and can be linked to a specific grant.

Creating and organizing

- **New Document** - start a blank document, or one pre-linked to a grant.
- **Upload** - bring in an existing draft to continue working on it here.
- **All Documents** - every document in the workspace, with quick access to open, comment, or track versions.

AI writing tools inside the editor

Opening a document reveals a set of AI-assisted panels down the side - things like tone and readability analysis, compliance and risk checking, budget building, reviewer simulation, and section rewriting. Each panel runs independently on the current document content and shows its results without leaving the page.

Exporting

Every document can be exported as a real PDF or opened in a clean print view for printing directly from your browser.

7. Building a Submission Package with AI

From any grant's detail page, "Build Submission Package with AI" generates a full first draft of everything you'd need to apply.

- 1 Click **Build Submission Package with AI** on a grant's detail page.
- 2 The AI drafts a full proposal - Statement of Need, Goals & Objectives, Program Description, Evaluation Plan, Organizational Background, and a Budget Narrative - plus a line-item budget sized to the grant's award range.
- 3 Review and edit every section directly on the page, and adjust budget line items as needed.
- 4 Use **Regenerate with AI** any time you want a fresh draft (this overwrites your edits, so it asks you to confirm first).
- 5 **Download Package PDF** whenever you want a copy to review offline or share with your team.
- 6 When it's finished, click **Mark Ready to Submit**.

***Tip:** "Ready to submit" means the package is finalized inside Grant Scout Pro - it does not automatically submit anything to the funder's own website. Every funder has a different application portal, so you'll still take the finished package there yourself to complete the actual submission.*

8. AI Tools

Assistant Chat

A general-purpose AI chat for questions about grants, your documents, or strategy - separate from the small help widget described in Section 13, which is specifically about how to use the platform itself.

Location Intelligence

Location-based context to help you understand geographic eligibility and regional funding patterns.

AI Insights

AI-generated observations about your workspace's grants, documents, and activity - a running feed of things worth your attention.

9. Managing Funder Relationships (CRM)

The CRM tracks relationships with funders and contacts the same way a sales pipeline tracks deals - useful once you're managing more than a couple of active funding relationships.

Pipeline

A board of funder relationships moving through stages: lead, contacted, in discussion, negotiating, and won or lost - with notes and deal details at each stage.

Contacts

Individual people at funder organizations - program officers, foundation contacts - so you keep a record of who you've talked to and what was said.

***Tip:** CRM is a paid add-on for most plans, though it's included automatically on the Enterprise tier.*

10. Negotiation Prep

Once a grant is in active discussion, “Negotiation Prep” on that grant's detail page generates an AI-assisted briefing: likely scope questions, talking points for the funding officer, an overall strategy, language for handling pushback, and budget notes - all grounded in your actual grant and workspace details, not generic templates. Each section is saved so you can pick it back up later.

11. Staying on Top of Deadlines

Beyond the grant-match notifications in Section 5, Grant Scout Pro also sends deadline reminders as a grant's close date approaches, so nothing slips through with no warning.

The **Activity** page in the sidebar logs everything that's happened in a workspace - documents created, members added, integrations connected - useful for keeping track of a team's work over time.

12. Account, Billing & Team

- **Usage** - see how much of your plan's searches, AI messages, and uploads you've used.
- **Billing** - manage your workspace's subscription plan and any add-ons like CRM.
- **Integrations** - connect and manage third-party tools and API keys for this workspace.
- **Settings** - update your organization profile, workspace name, and preferences.
- **Admin** - for workspace owners: manage team members and roles.

13. Getting Help Anytime

A small chat icon sits in the bottom-right corner of every workspace page (it fades in when you hover over that corner, so it stays out of your way otherwise). Click it to ask, in plain language, how to do something on the page you're currently viewing - it knows what section of the app you're in and answers accordingly.

This guide covers Grant Scout Pro as of its current version. Screens and features may be added or refined over time.
